Important information

¹ It is not possible to invest directly in an index.

² An investment in the Fund is neither insured nor guaranteed by the U.S. government.

³ Investing in commodities or the securities of companies operating in the commodities market involves a high degree of risk, including leveraging strategies and speculative investment practices that may increase the risk of investment loss, including the principal value invested. Investments may be highly illiquid and subject to high fees and expenses.

⁴ As a “fund of funds” this Portfolio, as a shareholder of underlying mutual funds, will indirectly bear its pro rata share of the expenses incurred by the underlying funds.

⁵ The target date for these funds is the approximate date when an investor plans to start withdrawing the assets from their retirement account. The principal value of these funds is not guaranteed at any time, including at the target date. These funds are designed to become more conservative over time as the target date approaches.

Investing involves risk, including possible loss of the principal value invested. Investments in foreign securities or sector funds, including technology or real estate stocks, are subject to substantial volatility due to adverse political, economic or other developments and may carry additional risk resulting from lack of industry diversification. Funds that invest in small or mid-capitalization companies experience a greater degree of market volatility than those of large-capitalization stocks and are riskier investments. Bond funds have the same interest rate, inflation, and credit risks associated with the underlying bonds owned by the fund. Generally, the value of bond funds rises when prevailing interest rates fall and falls when interest rates rise. Investing in lower-grade debt securities (“junk” bonds) may be subject to greater market fluctuations and risk of loss of income and principal than securities in higher rated categories. There are ongoing fees and expenses associated with investing. Bear in mind that higher return potential is accompanied by higher risk.

Investors should consider the investment objectives, risks, charges and expenses of investment options carefully before investing. This, and additional information about the investment options, can be found in the prospectuses and, if available, the summary prospectuses which can be obtained on the member website at myhealth.bankofamerica.com or by calling Customer Care at 800.718.6710. Investors should read the prospectuses and, if available, the summary prospectuses carefully before investing.
