

# Novel Plant Communities of Pennsylvania

# what is a novel plant community?

novel plant communities are man made communities of plants that group plants that share a common environment and mimics a historic plant community.

These communities can be used to create comprehensive conservation plans such as wide-scale land management or small scale designs in a back or front yard!

# incorporating novel plant communities into your own garden:

start small. You don't have to convert your whole yard to native plants. Instead try introducing native plants little bits at a time. It's more economical and this approach will let you get to know each plant well. of course, this does mean that your native plant will have to compete with non native plants, which may be hard if you have invasives in your yard.

# Sunny/Dry locations:

	scientific name	common name
trees	<ul style="list-style-type: none"><li>• <i>Pinus strobus</i></li><li>• <i>Nyssa sylvatica</i></li><li>• <i>Sassafras albidum</i></li><li>• <i>Cercis canadensis</i></li><li>• <i>Amelanchier arborea</i></li></ul>	<ul style="list-style-type: none"><li>• eastern white pine</li><li>• black gum</li><li>• sassafras</li><li>• redbud</li><li>• common serviceberry</li></ul>
